Journey complete...sort ofBy Cathy R.If you have been following the stories of the Inca gold, El Dorado, the Cave of Tayos, etc., your journey is not complete until you have read this book. Truly amazing. But beware! If you think your curiosities will now be satisfied, instead be prepared to launch

into one of many new possible journeys - Magyar/Sumarian/Egyptian connections, more accurate translations of Sumarian and Egyptian texts, origin of the planets, mytho-history! Stan Hall is truly an amazing man! 6 of 6 people found the following review helpful. Amazing book about an ancient golden library hidden in JungleBy Maskcalavera This is those kind of books that are written from venturer scientifics who live finding the gold of gods but what they found was better than just a mere gold.. a hole library that may change the history of our life on earth and much more. This golden library is located in the ia jungle in Ecuador, where ancient tribes are living in that zone. Based on real life and expeditions. Also I recommend to read the 12th planet great book to know the origin of the humanity. I live in Ecuador and reading this book make me I wanna go to Tayos Caves.. 4 of 5 people found the following review helpful. The Serenity of a DreamBy Victor dela Brates I chose this book because of the adventure word in the presentation. One has to relax from time to time and what better choice do you have when studying the stupefying sudden apparition of the civilizations on this planet, than a report regarding the adventurers, about the treasure hunters searching for the lost gold of the Ancient Mezo-American Indians? I was expecting to get a little bit bored because, although not being rich or even financial secured, I belong to that strange minority of people that have no sense about the value of the money. The only way I can feel money`s significance is connected to my compulsion for buying books. Otherwise no currency in the world is exerting any attraction on me in any way. But, pay attention, the treasure this book is focusing on is in fact a huge anthropological museum dominated by a big library of metal and crystal manuscripts! So, instead of getting bored, I suddenly found myself elated when finally, after the author has built step by step a pyramid of the best suspense ever, the reader finds himself (or herself) in the middle of this promised treasure cave. Oh, poor Aladdin, oh, poor Ali-Baba: they didn`t even dreamed to a such a generous wealth elevated by the purity of the materials and the profoundness of the objects` significance. In the Tayos cave various rooms are hosting workshops full of figurines of all kind of animals, even unknown in the American Continents, strange scenes like that of a golden human skeleton lying on a crystal bed, sculptures of mixed human and animal beings, altogether like the models and blueprints for an experimenting Creator. The serenity of the final considerations in which the author leaves those information as an inheritance for the whole humankind is enriching the book with a supplemental dimension. The dimension of a message about the history of consciousness. A present human consciousness that is gradually growing to become equal with that of the ancients that provided the dreamed richness that are the object of this wonderful book.

In 1976, Scottish engineer Stan Hall an expedition to the caves of the Tayos Indians in Ecuador, involving a dozen institutions, joint Special Forces, and astronaut professor Neil Armstrong as Honorary President and participant. This journey ended with his identification of Atlantis and Cattigara, and the entrance to the Metal Library.
